

Alexis Beaumont

Cybersecurity & Infrastructure Engineer with hands-on experience in SIEM, Linux environments and secure network architectures. Passionate about building resilient and secure systems.

EDUCATION

BAC +5
NEXA
NETWORK, SYSTEMS &
CYBERSECURITY ENGINEER
2024 - 2026

BAC +3
MATRICE L'ECOLE
APPLICATION DESIGNER &
DEVELOPER
2023 - 2024

BAC +2
AVENIR84
WEB DEVELOPER
2022 - 2023

SKILLS

Security: Wazuh, Opnsense, Metasploit
Tools: Docker, Git, PM2, CI/CD
Frameworks: Laravel, React, Next.js
Languages: PHP, JavaScript, SQL

EXPERIENCES

CYBERSECURITY & INFRASTRUCTURE ENGINEER (LINUX, SIEM, CLOUD)

AMX1 | 2024 - 2026

- **Full ownership of cybersecurity strategy and operations** across internal infrastructure and client environments, ensuring system integrity and incident prevention
- **Advanced Linux infrastructure management** (hardening, automation, performance tuning) across on-premise and cloud environments, virtualization with Proxmox
- **Designed secure network architectures with segmentation** (WAN/LAN/DMZ) and controlled access via VPN
- **Deployment and administration of SIEM & IDS (Wazuh, Suricata):** agent integration, dashboards, threat detection and real-time alerting
- **Implemented and managed reverse proxy architectures** (NGINX / HAProxy) for secure service exposure
- **MySQL database management**, secure data handling and backend integration (Node.js / Express)
- **Designed and deployed a RAG-based AI** system for internal data processing
- **Conducted penetration testing and vulnerability assessments** (Hydra, Nmap, SQLMap, Metasploit, Burp Suite)
- **Privilege escalation & Linux exploitation** (SUID, hardening)

APPLICATION DESIGNER & DEVELOPER

GLANUM | 2023 - 2024

- **Setting up databases:** Development and optimization of efficient data structures to meet the specific needs of customer projects.
- **System design:** Development of Conceptual Data Models (CDMs), using the principles of Domain-Driven Design (DDD) and Model View Controller (MVC) principles to structure software solutions.
- **Software project management:** Implementation of upgrades and bug fixes on customer projects, ensuring continuous improvement and optimum customer satisfaction.
- **Development and deployment:** Work in various development environments, automated and manual deployment (SSH), using Docker containers, version control tools (Git) and CI/CD pipelines for continuous seamless integration and delivery.
- **Automation and maintenance:** Creation of commands executed via CRON to automate applications, implementing algorithms, interface middleware and services with dependency injection, with the aim of producing secure, scalable and maintainable code.
- **Use of ORM:** In-depth experience with Eloquent ORM to manipulate and query databases efficiently and intuitively.
- **Agile methodology:** Active participation in an Agile environment, collaborating teams to ensure rapid response to project requirements and continuous process improvement.

BACK-END DEVELOPER INTERN

FLOW'S BY ESTHER | 2022 - 2023

Development of the "Slash" application presented at French Tech Grande Provence.

- **Multifunctional management platform:** Design and implementation of a platform for rapid tracking of personal and professional time, as well as management of tasks to be carried out on the same project.
- **Analysis and reporting:** Development of reporting and invoicing sections offering overviews of activity-by-activity balances, with dynamic graphs for calculating hourly rates, as well as revenues and expenses by project.
- **Optimized productivity:** Creation of a tool enabling users to plan their work plan their work in advance, reducing their mental workload and increasing their productivity.
